 Nguyen Xuan Tien Dat |  Nguyen Xuan Tien Dat

SUMMARY

Backend Software Engineer with hands-on experience developing RESTful APIs using Spring Boot and NestJS. Completed all coursework toward a Bachelor's degree in Information Technology and currently awaiting graduation. Passionate about building scalable, reliable systems and eager to contribute to impactful digital transformation projects while continuously learning and growing.

TECHNICAL SKILLS

- **Languages & Backend:** Java (Spring Boot), SQL, REST APIs
 - **Testing:** Manual Testing, API Testing (Postman), Test Case Design, Requirement Analysis
 - **Frontend & Database:** ReactJS, HTML/CSS, Tailwind CSS | MySQL, PostgreSQL
 - **Concepts:** Data Structures, Algorithms, OOP
 - **Tools & DevOps:** Docker, GitHub, Postman, Render, Vercel
 - **AI & Productivity Tools:** ChatGPT, Antigravity, prompt engineering, AI-assisted debugging and development workflow optimization.
-

EDUCATION & CERTIFICATIONS

Sai Gon University - ENGINEER OF INFORMATION TECHNOLOGY | 2022 - 2027

Recipient of the Academic Encouragement Scholarship during the third year of university.

Languages: IELTS 6.0

ACTIVITIES: Build with AI Ho Chi Minh City 2026 – Google Developer Groups

Completed hands-on AI code labs (LLM, GenAI basics)

WORK EXPERIENCE

ICLC Vietnam | May 2026 – July 2026

Project: DigiSchool Arena – Online Competition Platform

- **Developed and maintained 10+ RESTful APIs** using NestJS and TypeScript for the Admin Portal, delivering features across the Arena Match and Question Management modules.
- Refactored the backend architecture and project structure following industry best practices to significantly improve code maintainability and scalability.
- Collaborated in a production-oriented environment with frontend developers and QA engineers to participate in requirement analysis and business workflow discussions.
- **Validated 20+ API** endpoints using Postman before feature integration, ensuring functional correctness and reducing deployment issues.
- Managed version control and team development workflows using Git Flow (feature branches, pull requests, code reviews).
- Designed database schemas and optimized SQL queries using MySQL to support core platform functionalities.

PROJECTS

AI Trip Planner (Fullstack Developer | 3 members) | April 2026 – Present | [Git repo](#)

Demo: <https://ai-trip-planner-dun-psi.vercel.app/>

Contributions:

- Designed and developed a travel planning system using Java/Spring Boot with Clean Architecture, handling the complete itinerary workflow from user input to trip generation.
- Built an independent AI Service with FastAPI and LLM APIs (via 9router) to generate personalized travel itineraries based on user preferences.
- Implemented JWT Authentication, role-based authorization, and **a responsive step-by-step UX using React**.
- **Deployed** the full cloud architecture on Vercel, Render, and Aiven

Tech stack: Java, Spring Boot, MySQL, React, FastAPI, FastAPI, Render, Vercel, Aiven

Drone-Assisted Food Delivery Microservices (Backend Developer | 2 members) | Jan 2026 - April 2026 | [Git repo](#)

Contributions:

- Designed **microservices architecture** using **Clean Architecture**
- Implemented secure authentication with JWT (Access/Refresh) and RBAC, along with **OTP verification** and **rate limiting**
- Ensured cross-service data consistency in drone delivery workflows using **Saga** and **Transactional Outbox** patterns, preventing message loss during service failures.
- Implemented **Idempotency Keys** and fault-tolerant mechanisms (Circuit Breaker, Retry) using **Resilience4j**

Tech stack: Java, Spring Boot, MySQL, RabbitMQ, Docker
